

THE *timeless* COMPASS

EXPLORING ANCIENT WISDOM THROUGH THE LENS OF SCIENCE

ACKNOWLEDGEMENTS

We extend our gratitude to the researchers, scholars and institutions whose dedication to scientific rigour and open-minded inquiry has shaped this compendium of research on Sudarshan Kriya Yoga (SKY) and other Art of Living offerings. Your contributions continue to illuminate new pathways for knowledge and discovery.

The Timeless Compass

Exploring Ancient Wisdom Through the Lens of Science offers an interplay of reason and wonder showcasing the inner workings of enduring knowledge systems.

The compendium maps profound insights from Ancient Systems of Knowledge (ASK) onto contemporary scientific frameworks, making them both accessible and practical.

With a balanced, evidence-based approach, this book illuminates the ever-expanding intersections of empirical research and time-honoured wisdom—revealing how these serve as a guiding compass for self-discovery, consciousness and human flourishing.

GURUDEV SRI SRI RAVI SHANKAR

A LIFE OF *inspiration*

Gurudev Sri Sri Ravi Shankar is a renowned spiritual and humanitarian leader whose vision for a stress-free, violence-free world has touched millions.

Through his teachings and global initiatives, including the Art of Living and the International Association for Human Values, Gurudev has inspired transformation in over 180 countries.

Gurudev's vision that spirituality should always stand the test of science drives the efforts of the research at Sri Sri Institute for Advanced Research.

Subjective understanding is spirituality. Objective analysis is science. Science and religion have been at loggerheads, but not spirituality as it encourages a spirit of inquiry.

TWO SIDES OF THE SAME COIN

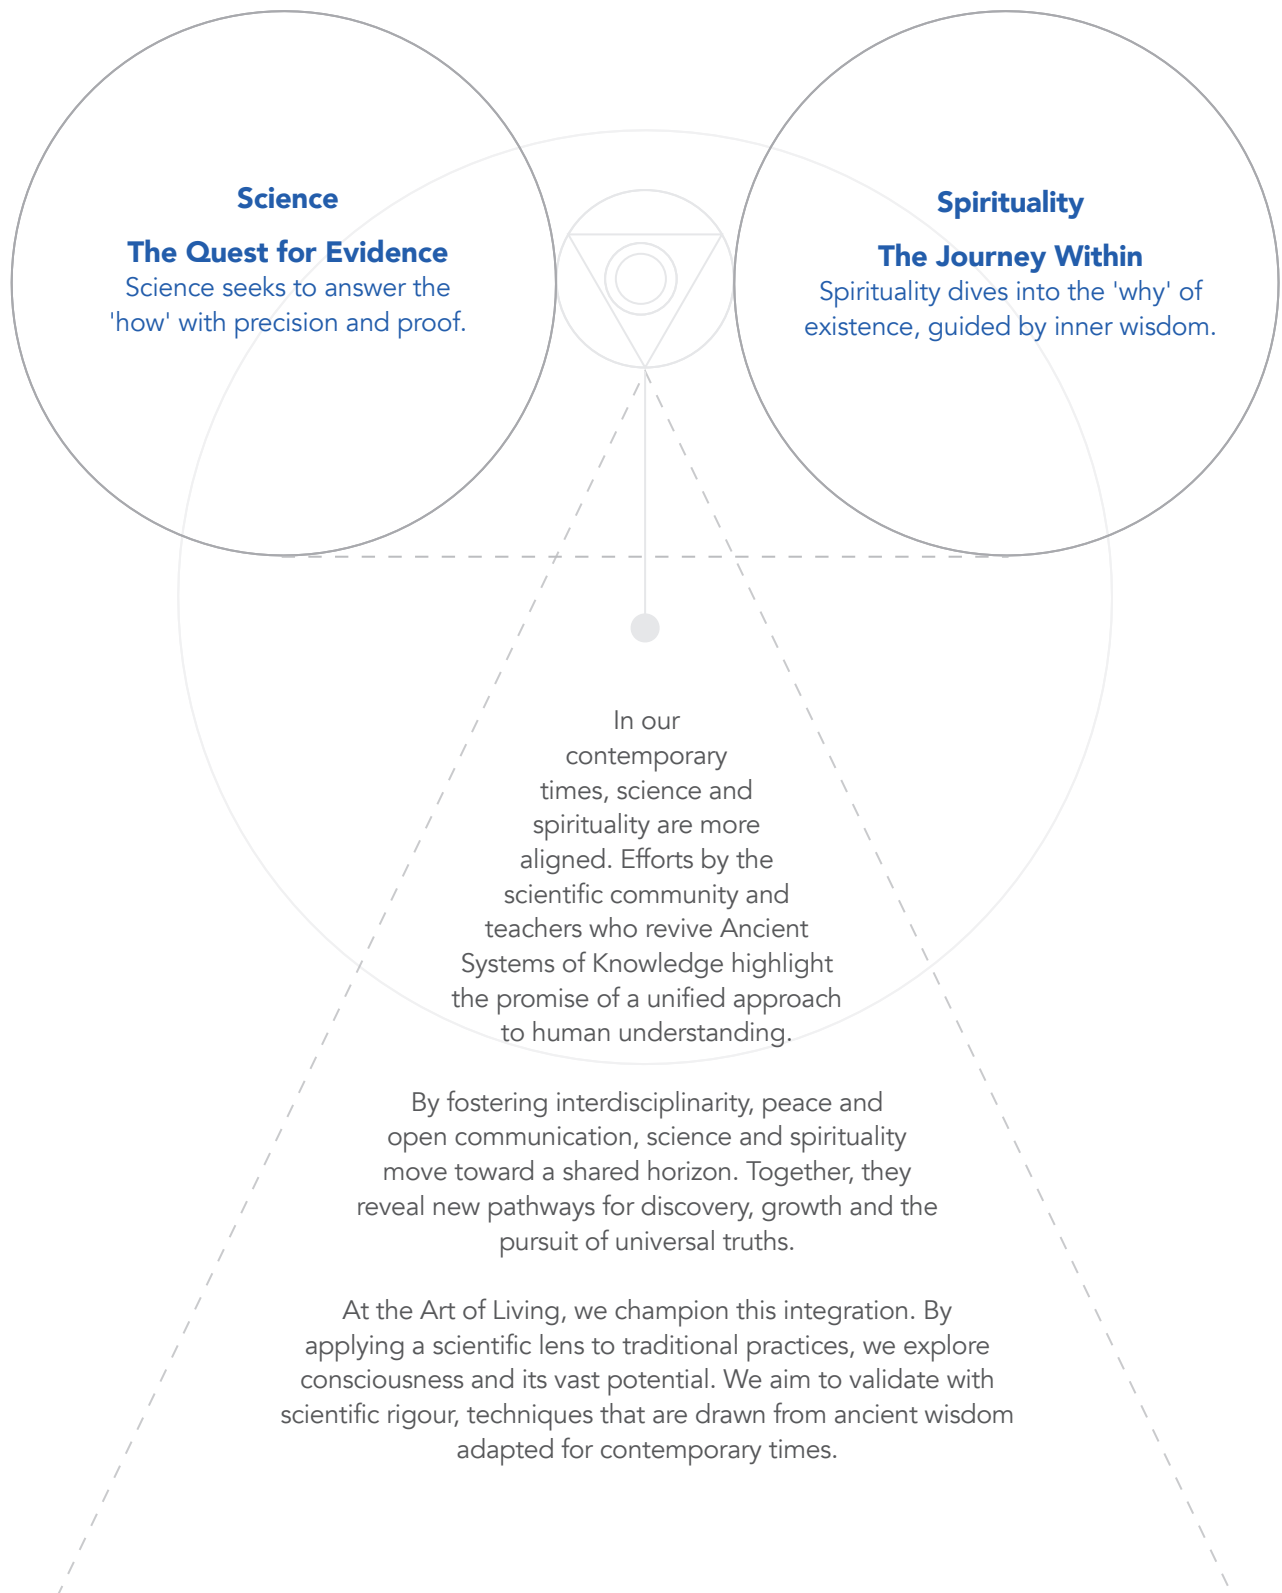

science & spirituality

The divide between science and spirituality continues to narrow as both fields embrace dialogue and collaboration. Modern perspectives highlight shared interests, especially in exploring consciousness, the nature of the universe and human potential.

KRIYA

A transformative practice that harnesses the natural power of rhythmic breathing to bring harmony and vitality to life.

Inspired by nature's intrinsic rhythms, SKY synchronises the body, mind and emotions, creating a profound sense of balance and renewal.

Sudarshan Kriya Yoga (SKY) is a unique technique which dissolves stress, fatigue and negative emotions, leaving the mind calm and focused while invigorating the body with energy and relaxation.

As a cornerstone of the Art of Living programmes, SKY has enriched the lives of millions across the globe with improved health, meaningful relationships and enduring happiness.

STRESS IS YOUR

survival ally

TURNED
FOE

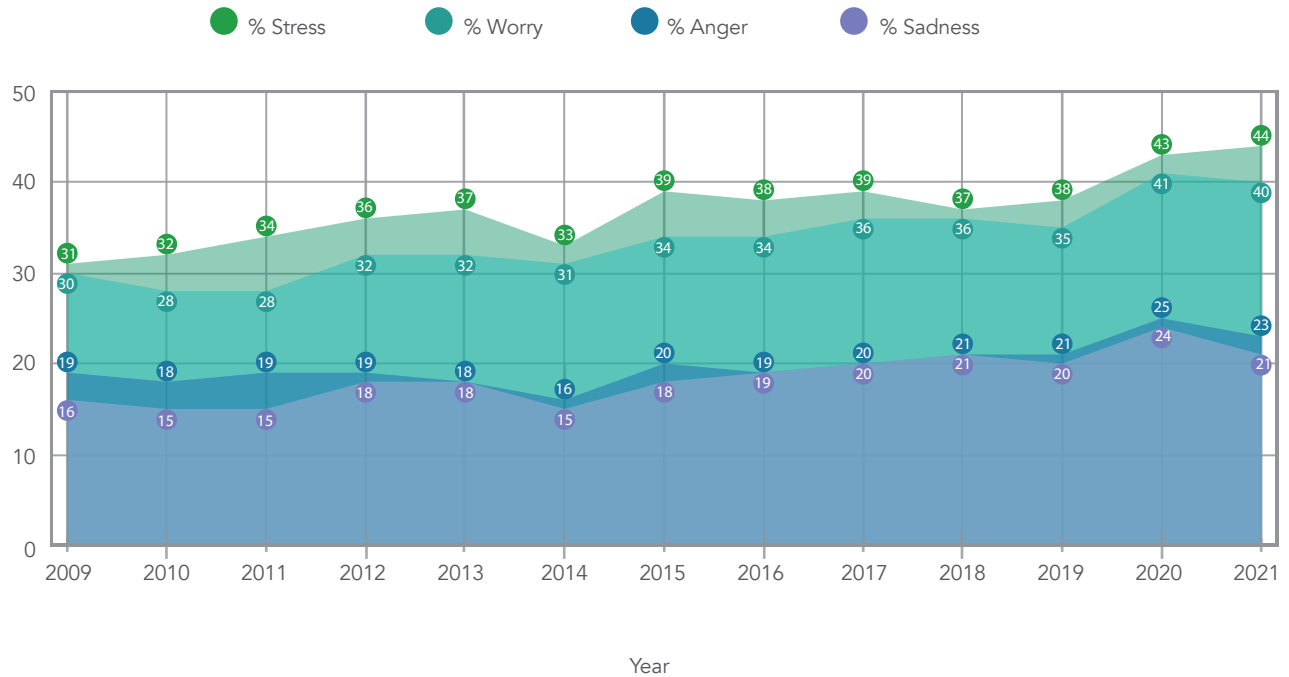

Designed to help you fight or flee, stress is essential for survival. But modern life - constant notifications, endless to-do lists and loneliness - has turned it against us.

When cortisol, the stress hormone, stays elevated too long, it shifts from protector to saboteur, wreaking havoc on our health and well-being. This dual nature makes stress management essential for well-being.

Stress is too much to do and too little time or energy. When we have too much to do with not enough time and energy, then we get stressed. So either you reduce your workload, which doesn't seem to be a possibility these days, or you increase your time – this is not possible either. So what we are left with is to increase your energy levels.

- GURUDEV SRI SRI RAVI SHANKAR

A GLOBAL SURGE IN DAILY STRESS AND NEGATIVE EMOTIONS

In 2020, the world's workers reached an all-time high for experiencing stress. In 2021, this percentage went even higher. And while 2021 saw declines in worry, sadness and anger, all these negative emotions remained above pre-pandemic levels.

SKY reduces stress, boosts well-being and enhances resilience across students, professionals and healthcare workers.

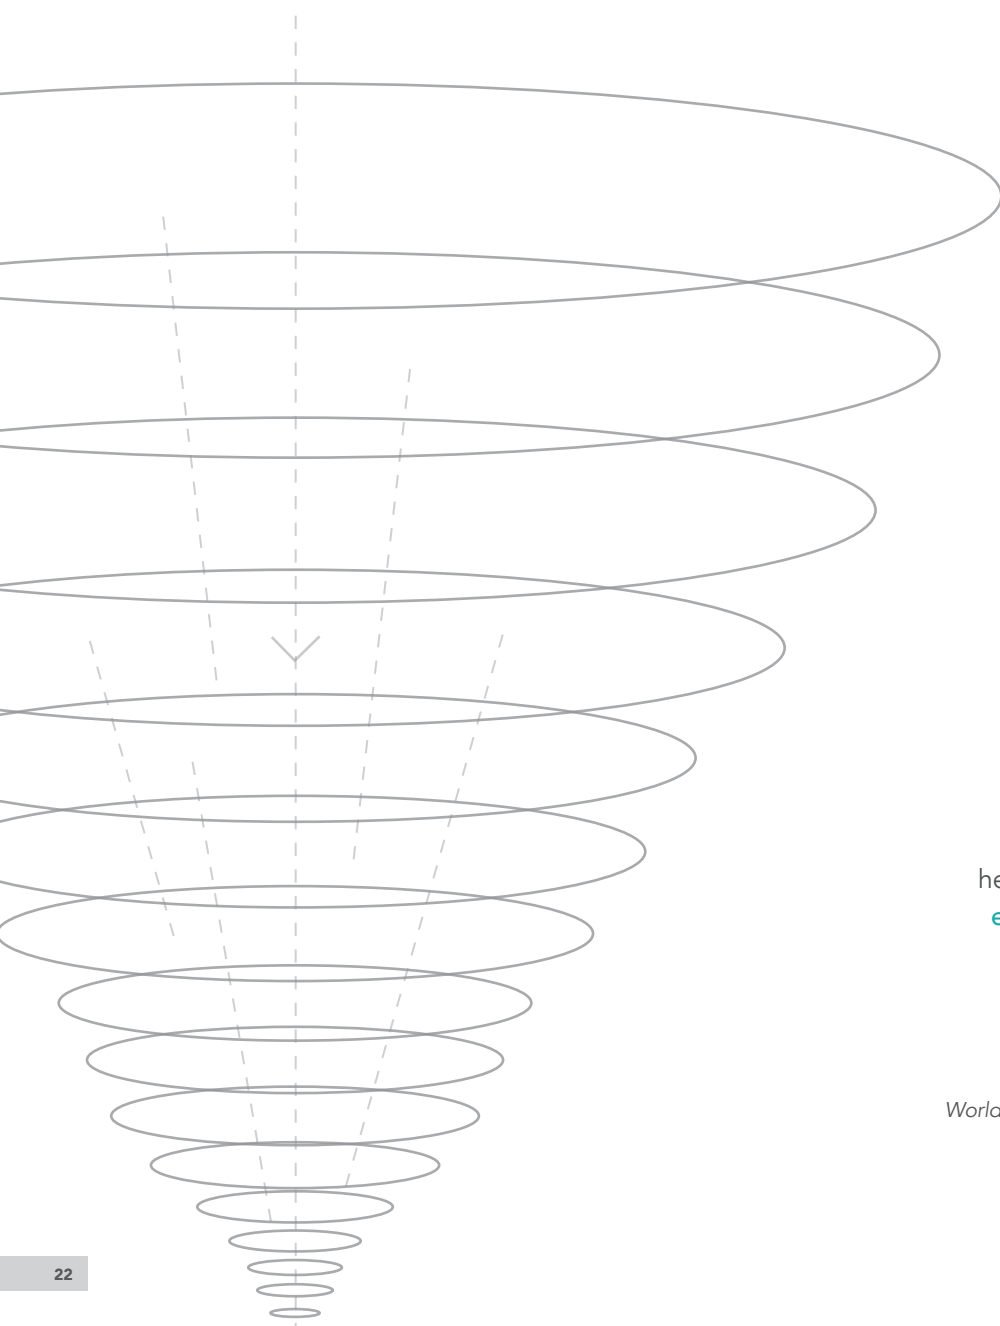

It supports healthy cortisol balance, stabilises emotions, improves mental health and cognitive performance particularly in high-stress environments.

SKY is effective in decreasing chronic and post-traumatic stress in managing PTSD and burnout specially for veterans.

A GLOBAL WAR | A BATTLE WITHIN

anxiety & depression

Sweeping the globe, anxiety and depression are interlinked struggles affecting millions. Anxiety's relentless worry can spiral into depression's heavy gloom, driven by stress, genetics, and societal pressures. Understanding this connection is key to breaking the cycle and reclaiming mental well-being.

advanced meditation PROGRAMME

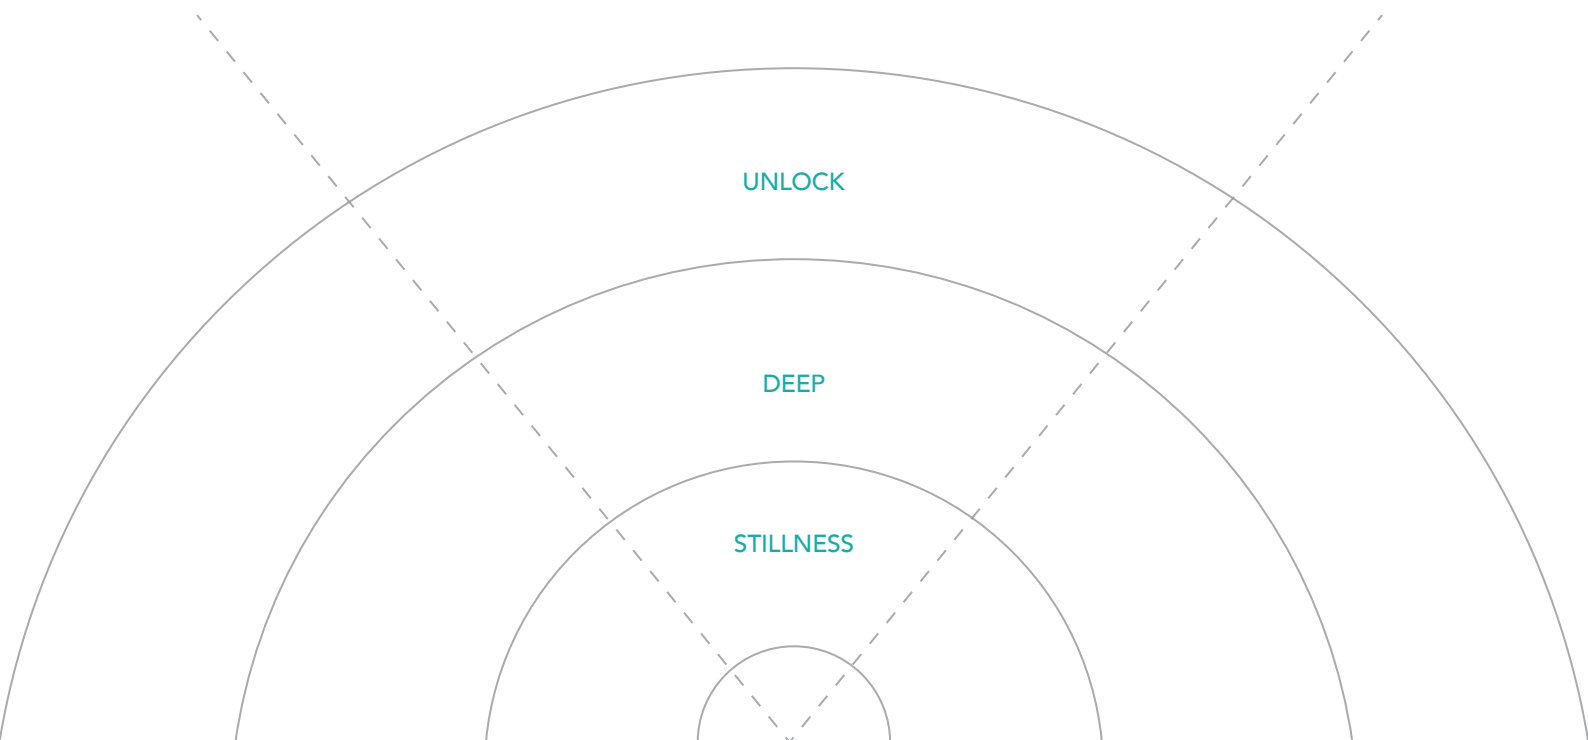

*Like God his creation,
The root its trunk,
Unknown, unheard, unseen,
In the silent chamber of the heart,
I am in you as you,
You are in me as me!*

- Excerpt from *You and Me: A poem* by
Gurudev Sri Sri Ravi Shankar

Silence speaks louder than words. Step into an inner space where stillness heals, restores and reveals. The Advanced Meditation Programme (AMP) is a deeply transformative retreat that uses the power of silence to nourish your body, mind and spirit.

Participants experience deep rest, emotional release and renewed vitality. As mental chatter fades, inner clarity dawns, creativity blossoms and energy rises.

Whether you seek calm, insight or a spark of inspiration, this journey inward connects you to a space of profound peace and the quiet strength within.

Scores 0 - 13: low stress

(Figure adapted from Kanchibhotla et al., 2019)

In our daily lives, the mind gathers many impressions, anxieties, tensions and worries that prevent us from experiencing happiness. They cloud our intuition and block inner joy. Impressions stain the mind and can lead to various psychosomatic issues.

Meditation is the skill of guiding the mind from chaos to stillness, from restlessness to deep restfulness. In this journey, we use ancient sounds known as mantras to help the mind settle into silence.

Cheng et al., 2025

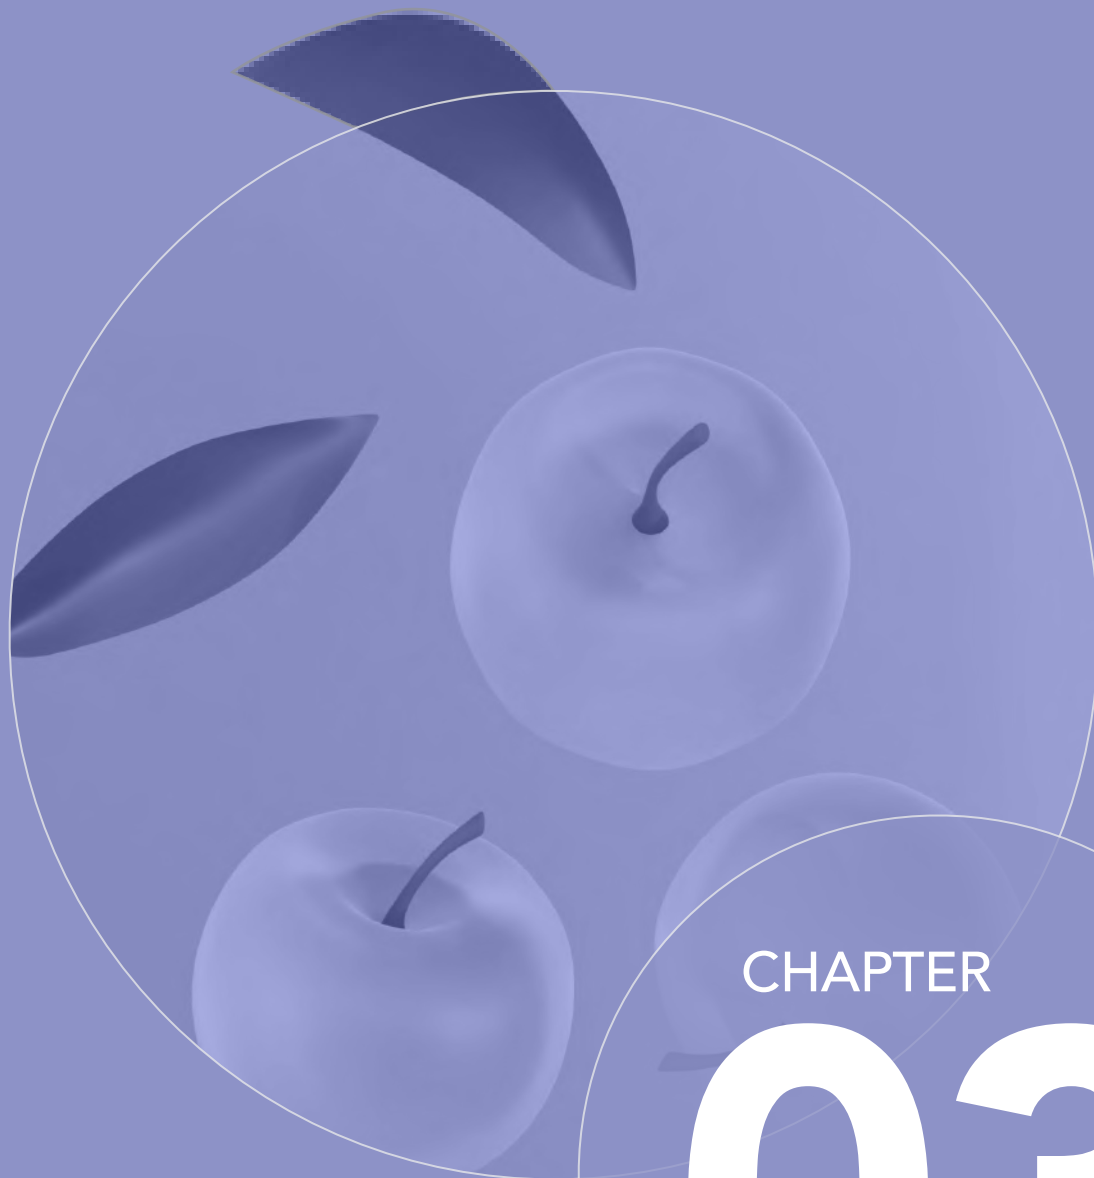

Sahaj Samadhi Meditation is a transcendental and effortless practice that promotes deep relaxation, mental clarity and physical well-being, while alleviating depression and anxiety.

This transformative practice, while being inherently de-concentrative and effortless in nature, fosters enhanced attention and focus.

A black and white photograph of a person sitting in a meditative lotus position on a polished floor. The person is seen from behind, centered between two large, white, rectangular columns. Sunlight streams in from the left, creating a bright path on the floor and casting long, soft shadows. The architecture is minimalist and modern, with clean lines and a sense of vastness.

BREATH IS YOUR BODY'S
SILENT **powerhouse**

Often overlooked, breath - the automatic act, drives energy production, supports brain function and regulates the nervous system. It's the bridge between your mind and body, quietly working behind the scenes to keep you alive and balanced, making it one of the most potent tools for vitality and health.

No matter what you eat, how much you exercise, how skinny or young or wise you are, none of it matters if you're not breathing properly.

STRONGER LUNGS WITH SUSTAINED PRACTICE

This graph shows how much lung function improved in healthy men who practised SKY for over a year. The purple and green bars show improvement over baseline in two age groups (21-30 and 31-40 years)

LUNG FUNCTION PARAMETERS EXPLAINED

Forced Vital Capacity (FVC): Largest volume of air forcibly exhaled after maximum inhalation

Peak Expiratory Flow Rate (PEFR): Maximum speed of air exhaled from lungs

Forced Expiratory Volume (FEV1): Maximum volume of air exhaled in one second

Breath-holding time (BHT): Maximum voluntary breath-hold duration

Maximum Voluntary Ventilation (MVV): Maximum air inhaled/exhaled per minute (extrapolated from a 15-second test)

It enhances psychophysiological resilience, reduces anxiety and supports a better quality of life in healthy individuals, as well as those with mild to severe COPD.

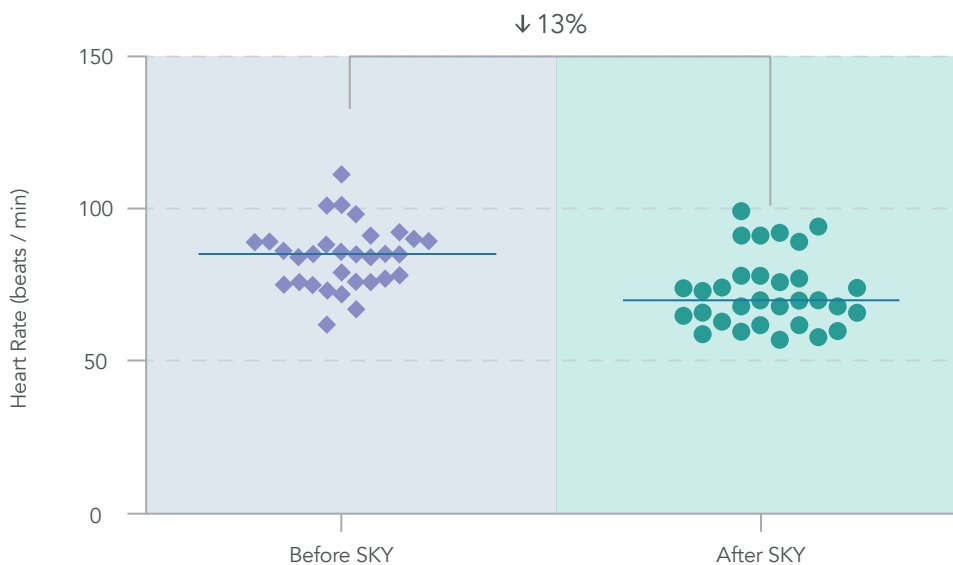

HEART IS THE *pulse* OF LIFE!

The human heart beats approximately 100,000 times daily, pumping blood throughout the body. Alarming, heart disease remains the leading cause of death worldwide.

According to the World Health Organisation (2021), over the past two decades cardiovascular diseases have accounted for nearly 32% of all global deaths, making them the leading cause of mortality. It is therefore crucial to understand how to protect and maintain the health of your heart.

SKY OFFERS A NATURAL WAY TO LOWER STRESS AND HEART RATE

This scatter plot shows that the average heart rate dropped by 13% in 30 healthy adults after practising SKY. This indicates a shift towards a state of deep rest and lower stress levels. For reference, a normal resting heart rate in healthy adults ranges between 60 and 100 beats per minute.

SKY ENHANCES BRAIN ACTIVITY LINKED TO FOCUS AND ALERTNESS

These images show brainwave activity from an EEG scan, highlighting levels of beta waves - which are linked to focus and alertness. The maps compare brain activity before and after 1 month of SKY practice in a student.

Red areas show high beta wave activity (greater focus/alertness). Blue areas show low beta wave activity.

The increase in red/yellow regions in the front-central part of the brain after practising SKY suggests enhanced brain activity related to attention and awareness.

(Figure adapted from Daniel et al., 2022)

Alpha waves: Linked to calmness, relaxation and light meditation

Beta waves: Active during focus, alertness and problem-solving

Gamma waves: Involved in intense focus, learning and cognition

Delta waves: Dominant in deep sleep and advanced meditation

Theta waves: Present in dreaming, creativity and deep relaxation

SKY reduces depression symptoms, enhances brain coherence, boosts relaxation and awareness, strengthens working memory and improves stress tolerance.

VAGUS NERVE
IS YOUR BODY'S SUPER

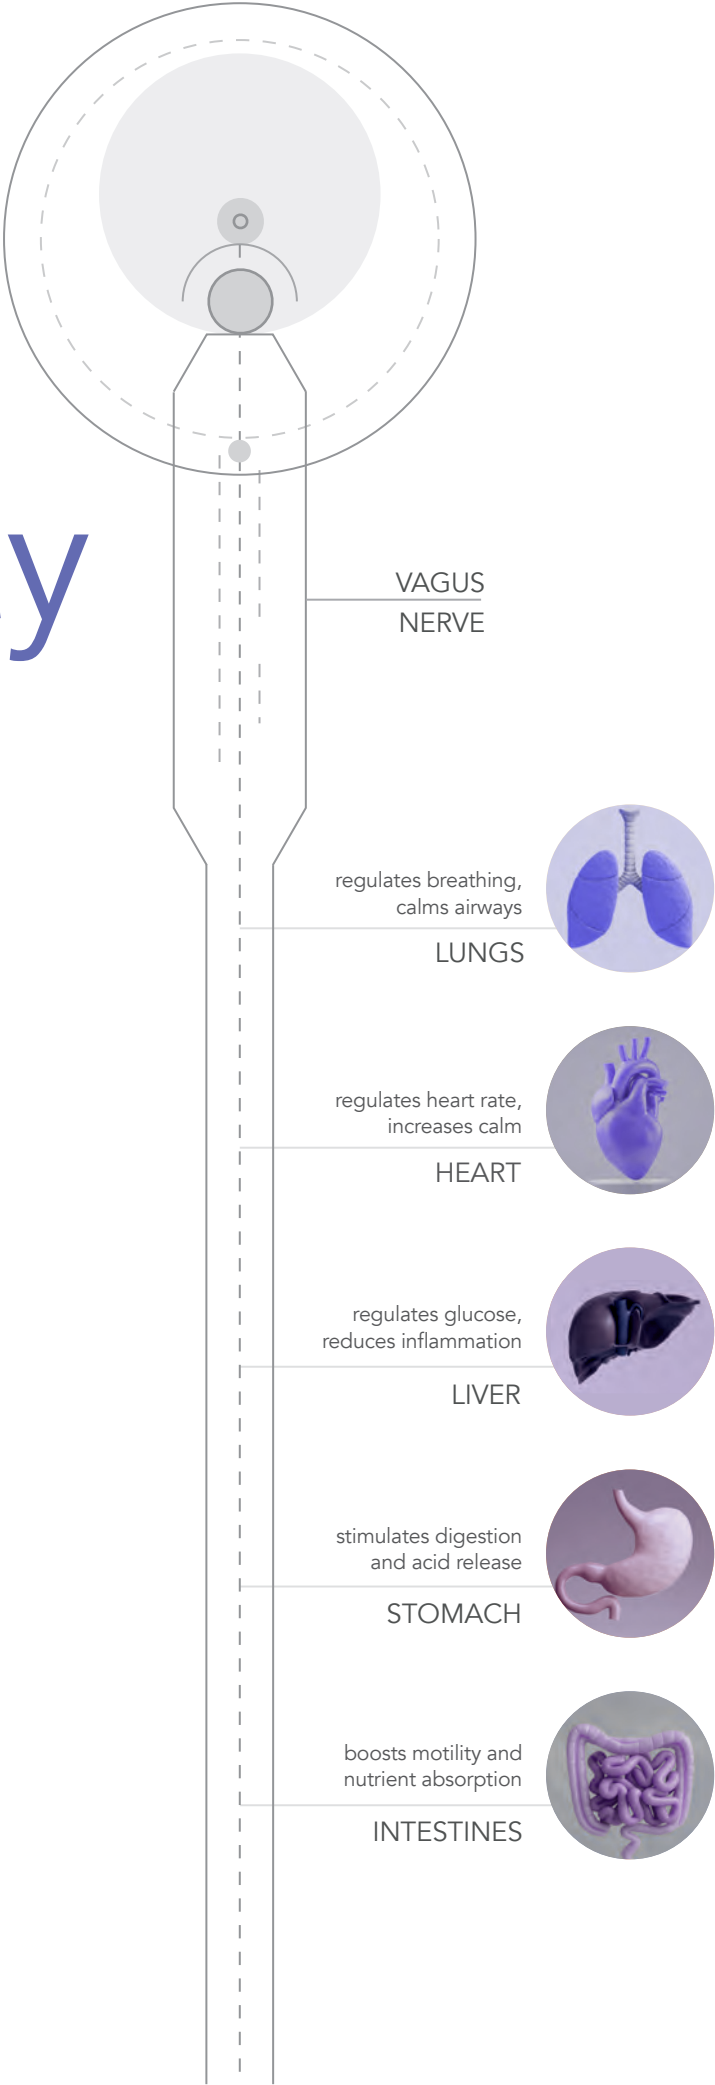

highway

The vagus nerve - the longest cranial nerve, stretches from the brainstem to the abdomen, linking the brain to vital organs such as the heart, lungs and digestive system.

This bi-directional communication pathway regulates essential functions including heart rate, digestion and aspects of emotional regulation.

Acting as a central command hub, it orchestrates critical processes to maintain your health, balance and social connectivity.

The vagus nerve, an intricate bundle of neural fibres, originates in the brainstem and extends throughout the body, connecting with all major organs.

VAGUS NERVE AND AUTONOMIC BALANCE EXPLAINED

Heart Rate Variability (HRV): Variation between heartbeats, indicating stress adaptability

Sympathetic Activity: Nervous system response that prepares for *fight* or *flight*

These shifts in autonomic balance support better stress regulation and emotional well-being highlighting SKY’s role in promoting nervous system health.

DIABETES ISN'T JUST *about* sugar

Diabetes is a chronic condition where the body struggles to turn food into energy. Type 2 diabetes (T2D) happens when insulin doesn't work properly or is produced in lower amounts, often linked to stress, obesity and poor lifestyle choices.

Diabetes management is not just about controlling blood sugar; it's about taking control of your entire lifestyle - your diet, exercise, stress and mindset.

- DR. DAVID NATHAN
DIABETOLOGIST

SKY SUPPORTS BETTER METABOLIC HEALTH IN T2D PATIENTS

This bar graph compares the health of people with T2D who practised SKY for 4 months with those who didn't. In people who practised SKY, fasting blood sugar, cholesterol and triglycerides dropped by 15–17%, while those who didn't practise SKY showed little or no change.

(Based on data presented in Agte and Tarwadi, 2004)

- HbA1c:** Shows average blood sugar over 2-3 months; healthy target is below 6%
- Fasting Blood Sugar (FBS):** Measures blood sugar after fasting; normal is 70–100 mg/dL
- Postprandial Blood Sugar (PPBS):** Taken 2 hours after eating; should be below 140 mg/dL
- LDL Cholesterol:** Bad cholesterol can clog arteries; ideal is below 100 mg/dL
- HDL Cholesterol:** Good cholesterol protects the heart; above 60 mg/dL is best
- Triglycerides:** Blood fat linked to heart health; normal is below 150 mg/dL

Dasappa et al., 2016

SKY offers promising benefits for managing T2D. It helps reduce fasting glucose, improve HbA1c, normalise lipids and enhance heart function.

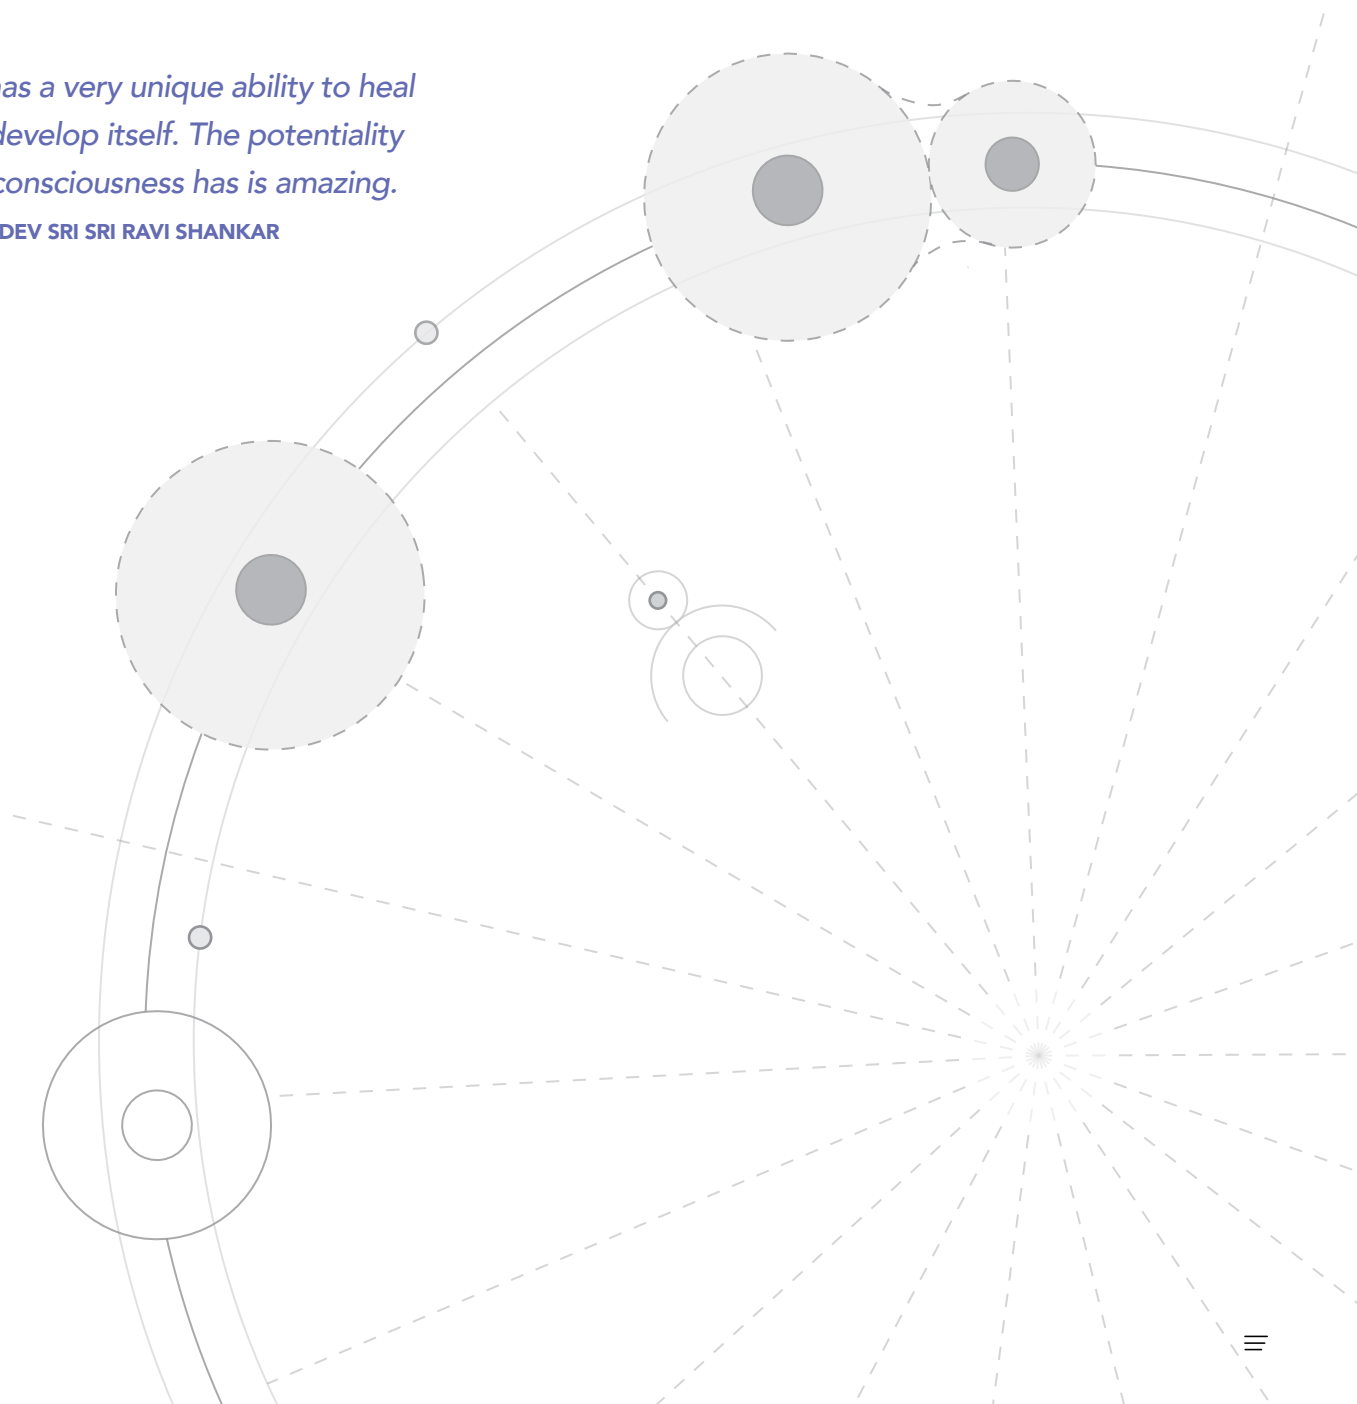

SKY improves quality of life and boosts treatment adherence making it a cost-effective, non-invasive complement to traditional therapies.

YOUR CELLS, BUT *out of* control

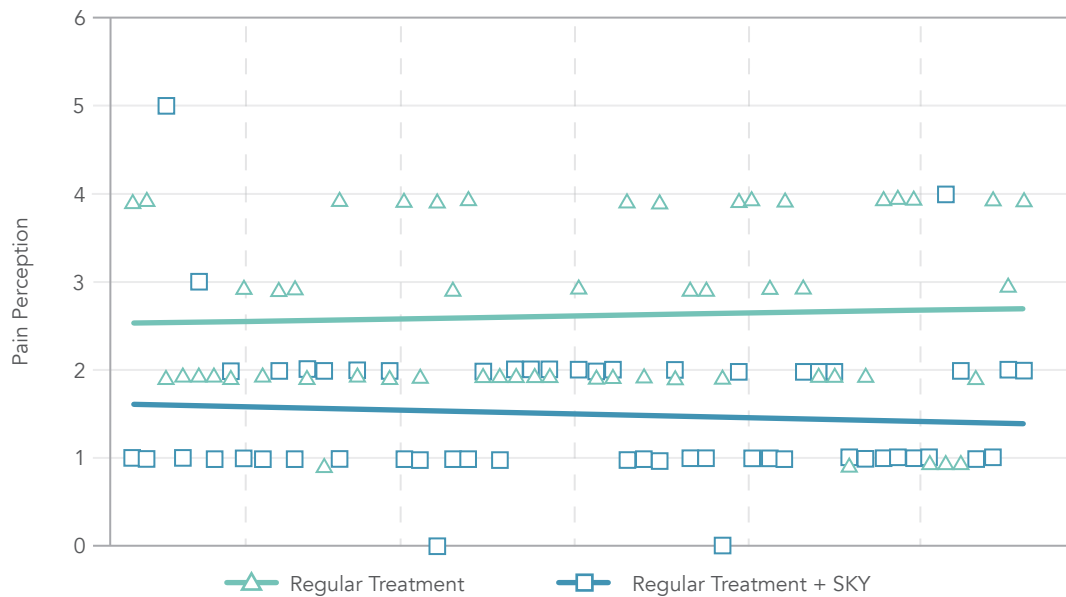

Each year, over 20 million people globally are diagnosed with cancer, with their immune systems fighting tirelessly to curb it. While primary care is crucial, complementary interventions enhance treatment, offering hope and strength in the battle against this relentless adversary.

It also reduces stress, alleviates pain and fosters mind-body resilience.

SKY demonstrates potential as a complementary cancer therapy, supporting both physical and emotional well-being.

GENES ARE LIKE

altered gene expression with SKY compared with other relaxing activities like music, nature walk

This Venn diagram shows how SKY can influence gene expression. After just one session, it altered the expression of 111 genes, including those related to immune response, communication between cells and cell structure. In comparison, other relaxing activities like music or nature walks, changed the expression of 38 genes.

(Figure adapted from Qu et al., 2013)

Gene expression is how your body activates certain genes to produce proteins or molecules that help it carry out important tasks.

SKY influences gene expression in immune cells, supporting metabolism, immune health and cellular stress management; larger studies are warranted to confirm these findings

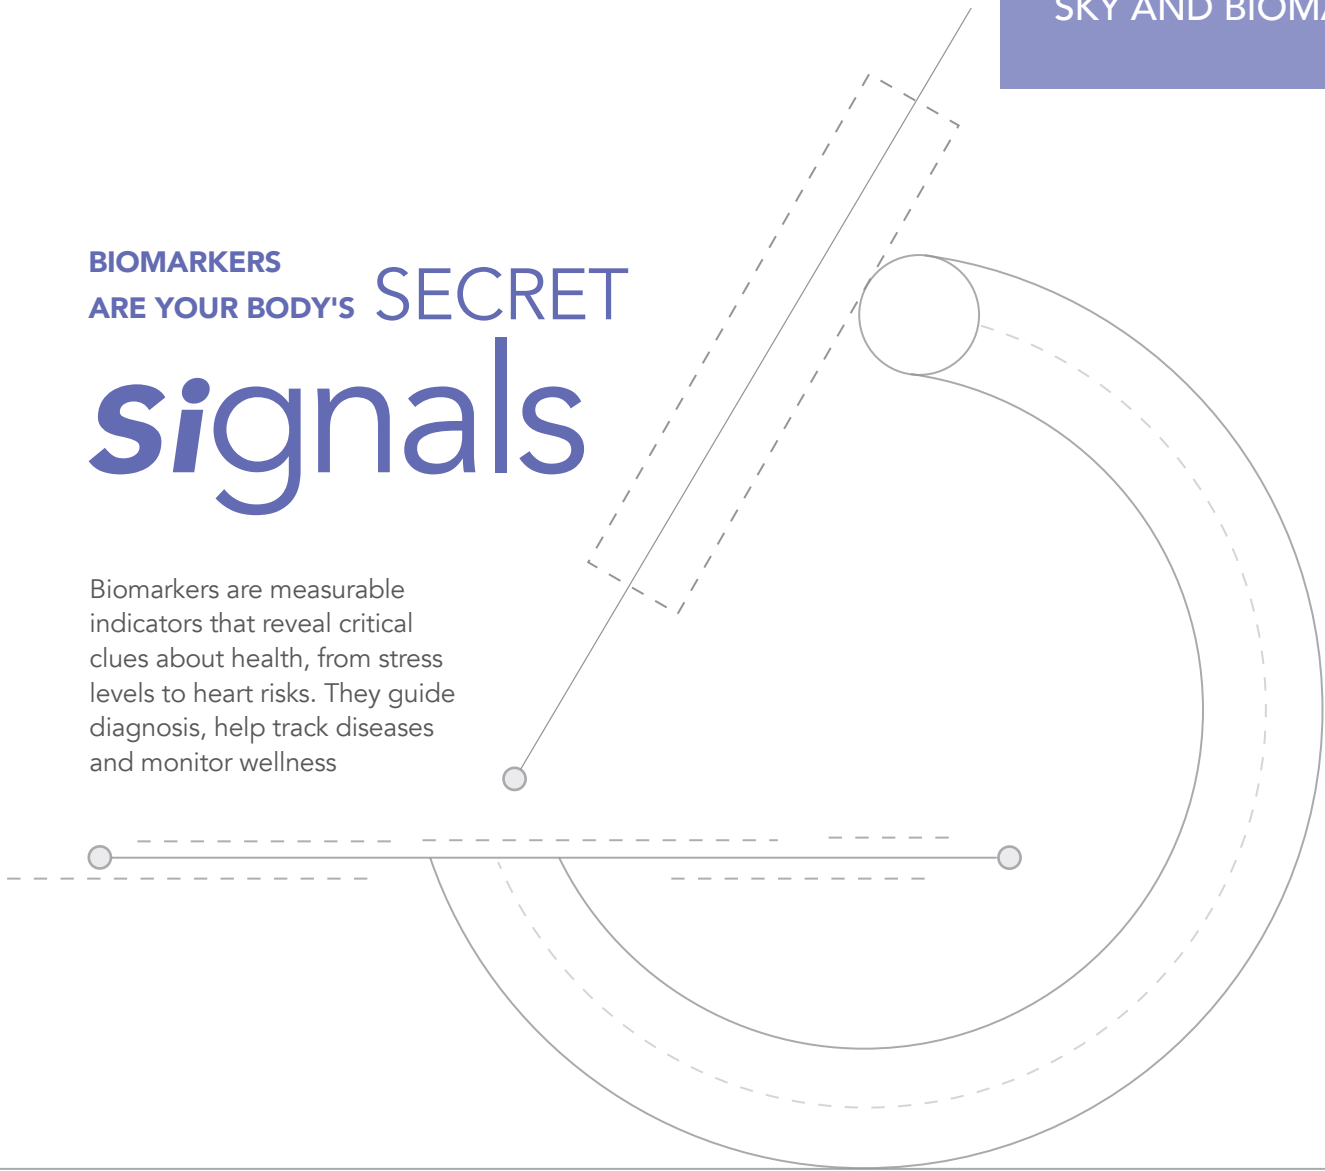

Ayyildiz and Arga, 2017

SKY affects fundamental molecular processes through its ability to reprogramme genetic activity. It impacts genes that improve immunity, resilience to stress and overall health, unlocking new possibilities for a longer healthier life.

STEADY THE WINGS, EMBRACE *the sky*

Empowering young minds with the right tools ensures a generation that is confident, emotionally balanced and primed for success. Yet, young people are rarely taught how to manage their minds, whether at home or in school.

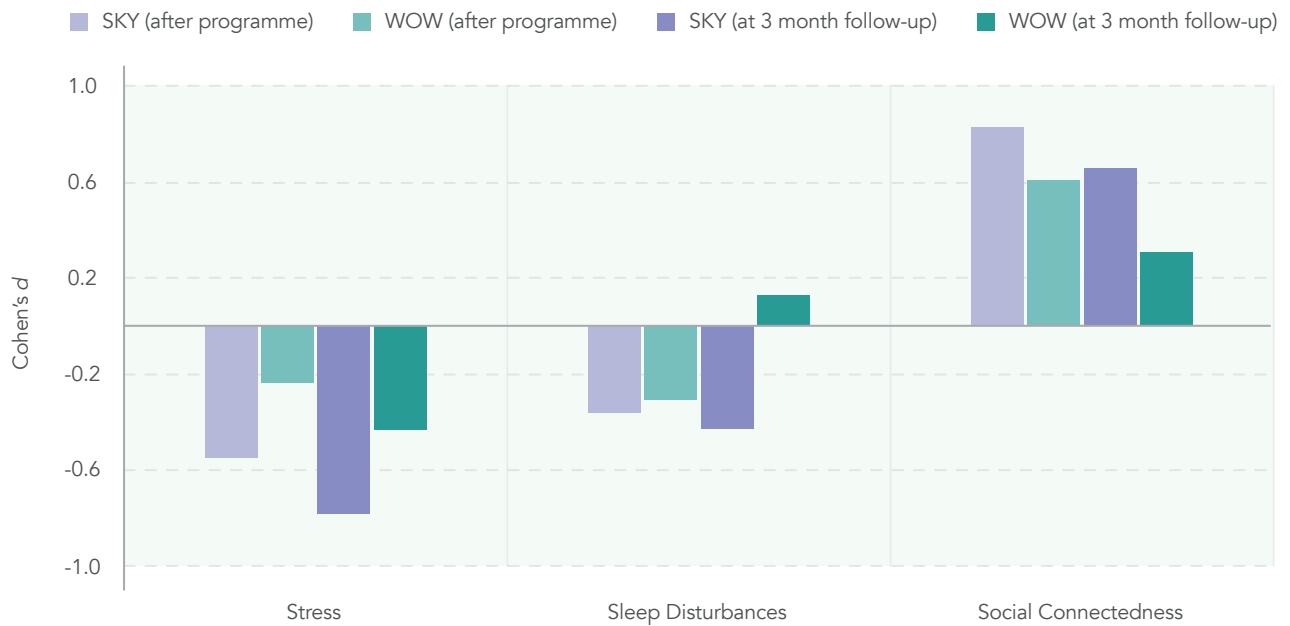

Globally, over 14% of adolescents experience mental health disorders, affecting academic performance, emotional resilience and future productivity. Stress, anxiety and emotional instability hinder their potential, impacting not only individuals but entire communities.

If you want to see the future of a nation, see the youth of that nation.

- GURUDEV SRI SRI RAVI SHANKAR

FROM STRESS TO STRENGTH: SKY EMPOWERS YOUNG MINDS

This graph shows how much participants improved with SKY as compared to Wisdom of Wellness (WOW); immediately after completion as well as at 3-month follow-up

SKY led to large reductions in stress, both immediately and at 3-month follow-up

Both SKY and WOW improved sleep, though the trends were smaller

Social connectedness went up in both groups, but the gains were stronger and lasted longer in the SKY group

Cohen's *d* tells us how big the effect was [0.2 = small effect, 0.5 = medium effect, 0.8 = large effect]

Kanchibhotla et al., 2018

Youth programmes, including Utkarsha Yoga, YES!, and YES!+, are showing remarkable promise in enhancing mental clarity, emotional resilience and academic achievement.

Studies across various age groups indicate that yoga-based practices help reduce stress, improve cognitive function and promote emotional stability.

Teenagers and young adults report improved concentration, reduced impulsivity and enhanced well-being, while also developing life skills, emotional intelligence and resilience.

These programmes are also associated with better social interactions and mental health, making them powerful tools for personal growth and development among young people.

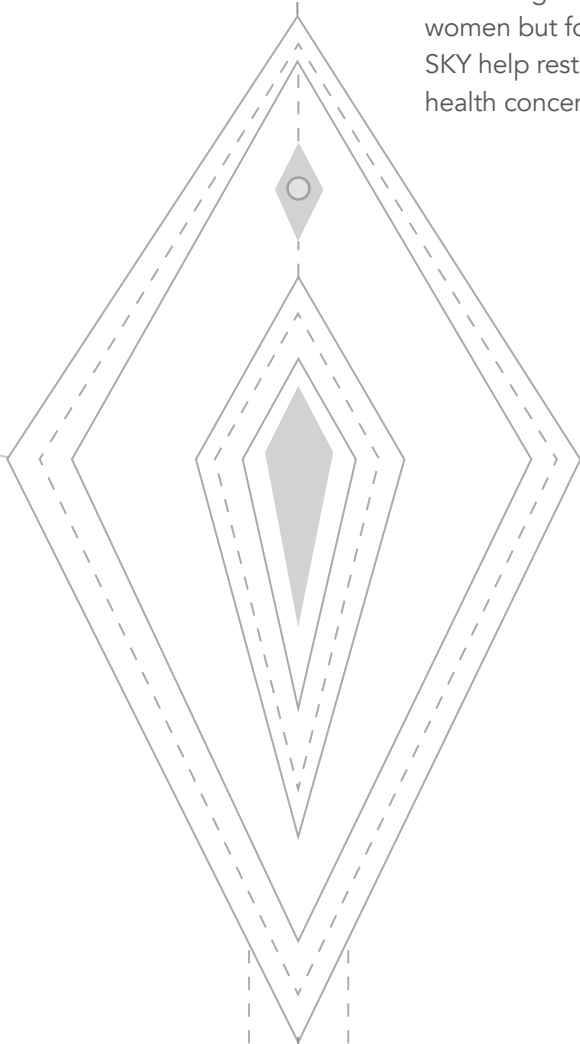

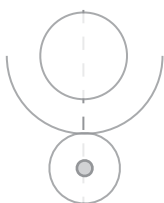

MORE THAN JUST THE *biology*

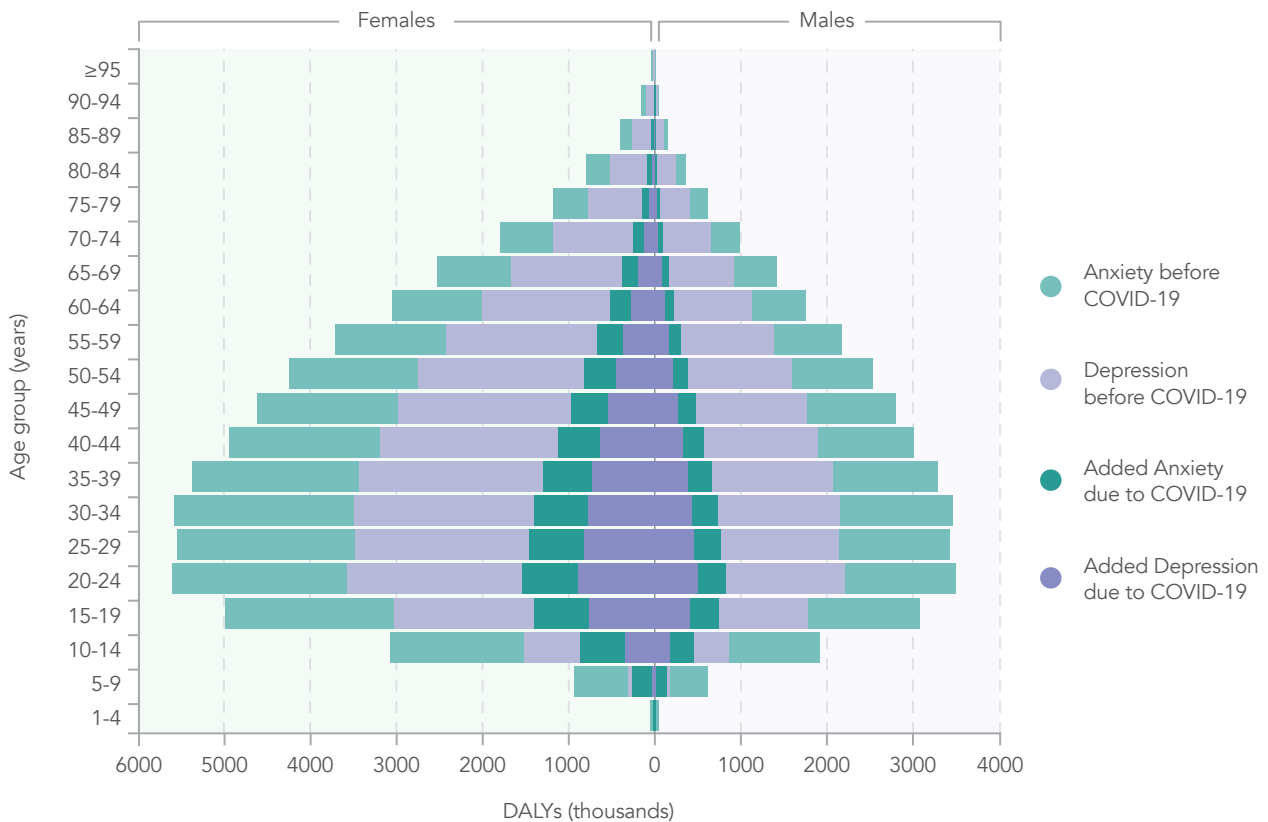

A woman's body is uniquely designed to nurture life both physically and mentally. From hormonal cycles to emotional resilience, every aspect of women's health is built to support and sustain life.

Yet this delicate balance is often disrupted by stress, chronic conditions and societal pressures. Women's health challenges - spanning reproductive health to mental well-being - require specialised care.

Prioritising women's health is vital not just for women but for society as a whole. Practices like SKY help restore balance and address common health concerns.

THE IMPACT OF ANXIETY AND DEPRESSION BY AGE AND GENDER

This graph shows the worldwide impact of depression and anxiety in 2020 across 204 countries, measured in disability-adjusted life-years (DALYs) - a way to count the years lost to early death or lived with disability. The left side shows females and the right side shows males. The bars highlight how these mental health issues affect different age groups. Light green and light purple show the levels of anxiety and depression before COVID-19, while dark green and dark purple show the extra impact caused by the pandemic.

Women, especially in their 20s to 50s, face a bigger challenge with these disorders compared to men, as seen by the larger bars on the female side. The pandemic made things worse, increasing the impact across all ages, especially for younger adults.

THE MIND'S HIDDEN POTENTIAL

Intuition is knowing without knowing. It's knowledge that isn't drawn from logic or the mind but from an inner silence. When the mind is free of cravings, aversions and distortions, then it settles and becomes sharper. That is when intuition develops. And meditation is key on this journey.

We all have this enormous wealth within, but somehow we have forgotten how to tap into it.

Intuition is a faculty of the consciousness and it is that which simply comes up beyond reason.

- GURUDEV SRI SRI RAVI SHANKAR

A PROGRAMME THAT TRANSFORMS YOUNG MINDS

The Art of Living's Intuition Programme for children and adolescents offers a powerful way to nurture their inner confidence, creativity and intuitive abilities. Through fun, guided techniques, children and young adults tap into their natural potential, gaining tools to thrive both emotionally and mentally. Parents worldwide have been amazed at the positive shift this process brings to their child's life.

I had a fear of darkness and stage fear when I was 6. After doing the programme, I overcame my fear of darkness. Now I am confident of performing on stage.

Trupti, Student

I used to be slow on court. After doing the Intuition Programme, I became really fast. My reaction time improved, and I was even able to foresee my opponent's next move.

Krishna, Tennis player

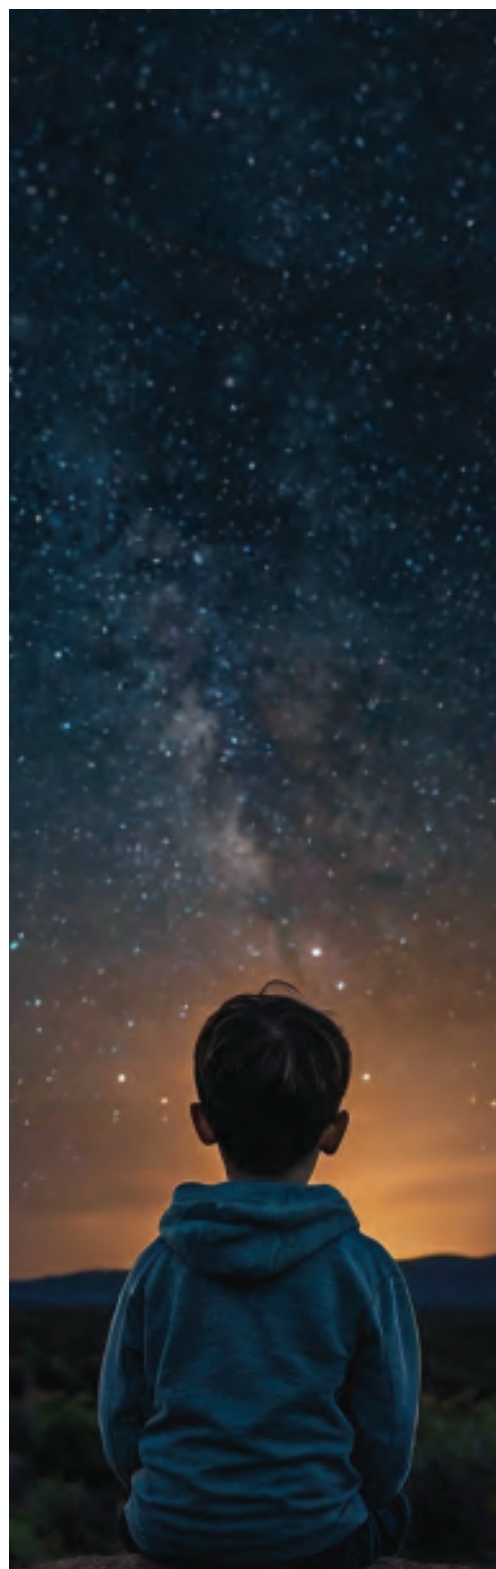

Intuition is required to make the right choice at the right time. This programme boosts their confidence when they get the first shot and that's the spark. Arjun used to get 60-70% marks, and now he is getting 100% in all subjects. His maturity level has gone up and he knows what to do in any situation. He's just a 10 year old kid.

Jay Soni, Parent

I have observed a vast change in the quality of learning in my elder son, a 10th-standard student. He can mentally solve mathematical problems including polynomials and trigonometry. He can grasp the concepts of physics taught in higher grades. His memory has improved and this is helping him with subjects having elaborate theories.

YOGA EASES MENSTRUAL PAIN

Yoga for Menstrual Pain Management

Narrative Review

Reduced menstrual pain through yoga
postures, breathing techniques and
Yoga Nidra

Reduced stress levels contributing to better
pain management

Improved pain tolerance during menstruation

Yoga helps regulate stress-related hormonal
fluctuations

Yoga is a holistic, non-drug therapy for
menstrual pain relief and can be integrated
as a daily practice for women with
menstrual disorders

Kanchibhotla et al., 2023

Yoga offers a powerful, research-backed path to well-being. Studies show it can lower blood pressure, enhance brain flexibility, ease menstrual pain, improve lung function and immunity.

Practices like Yoga Nidra and breathwork calm the nervous system and strengthen emotional resilience even during times of crises.

These techniques are low-cost, accessible and effective. Yet despite widespread awareness of yoga's benefits, regular practice remains limited - highlighting a key opportunity for integrating yoga practices into preventative healthcare.

*Yoga...calm, quiet,

ADDRESSING THE *root* cause

NOT JUST SYMPTOMS

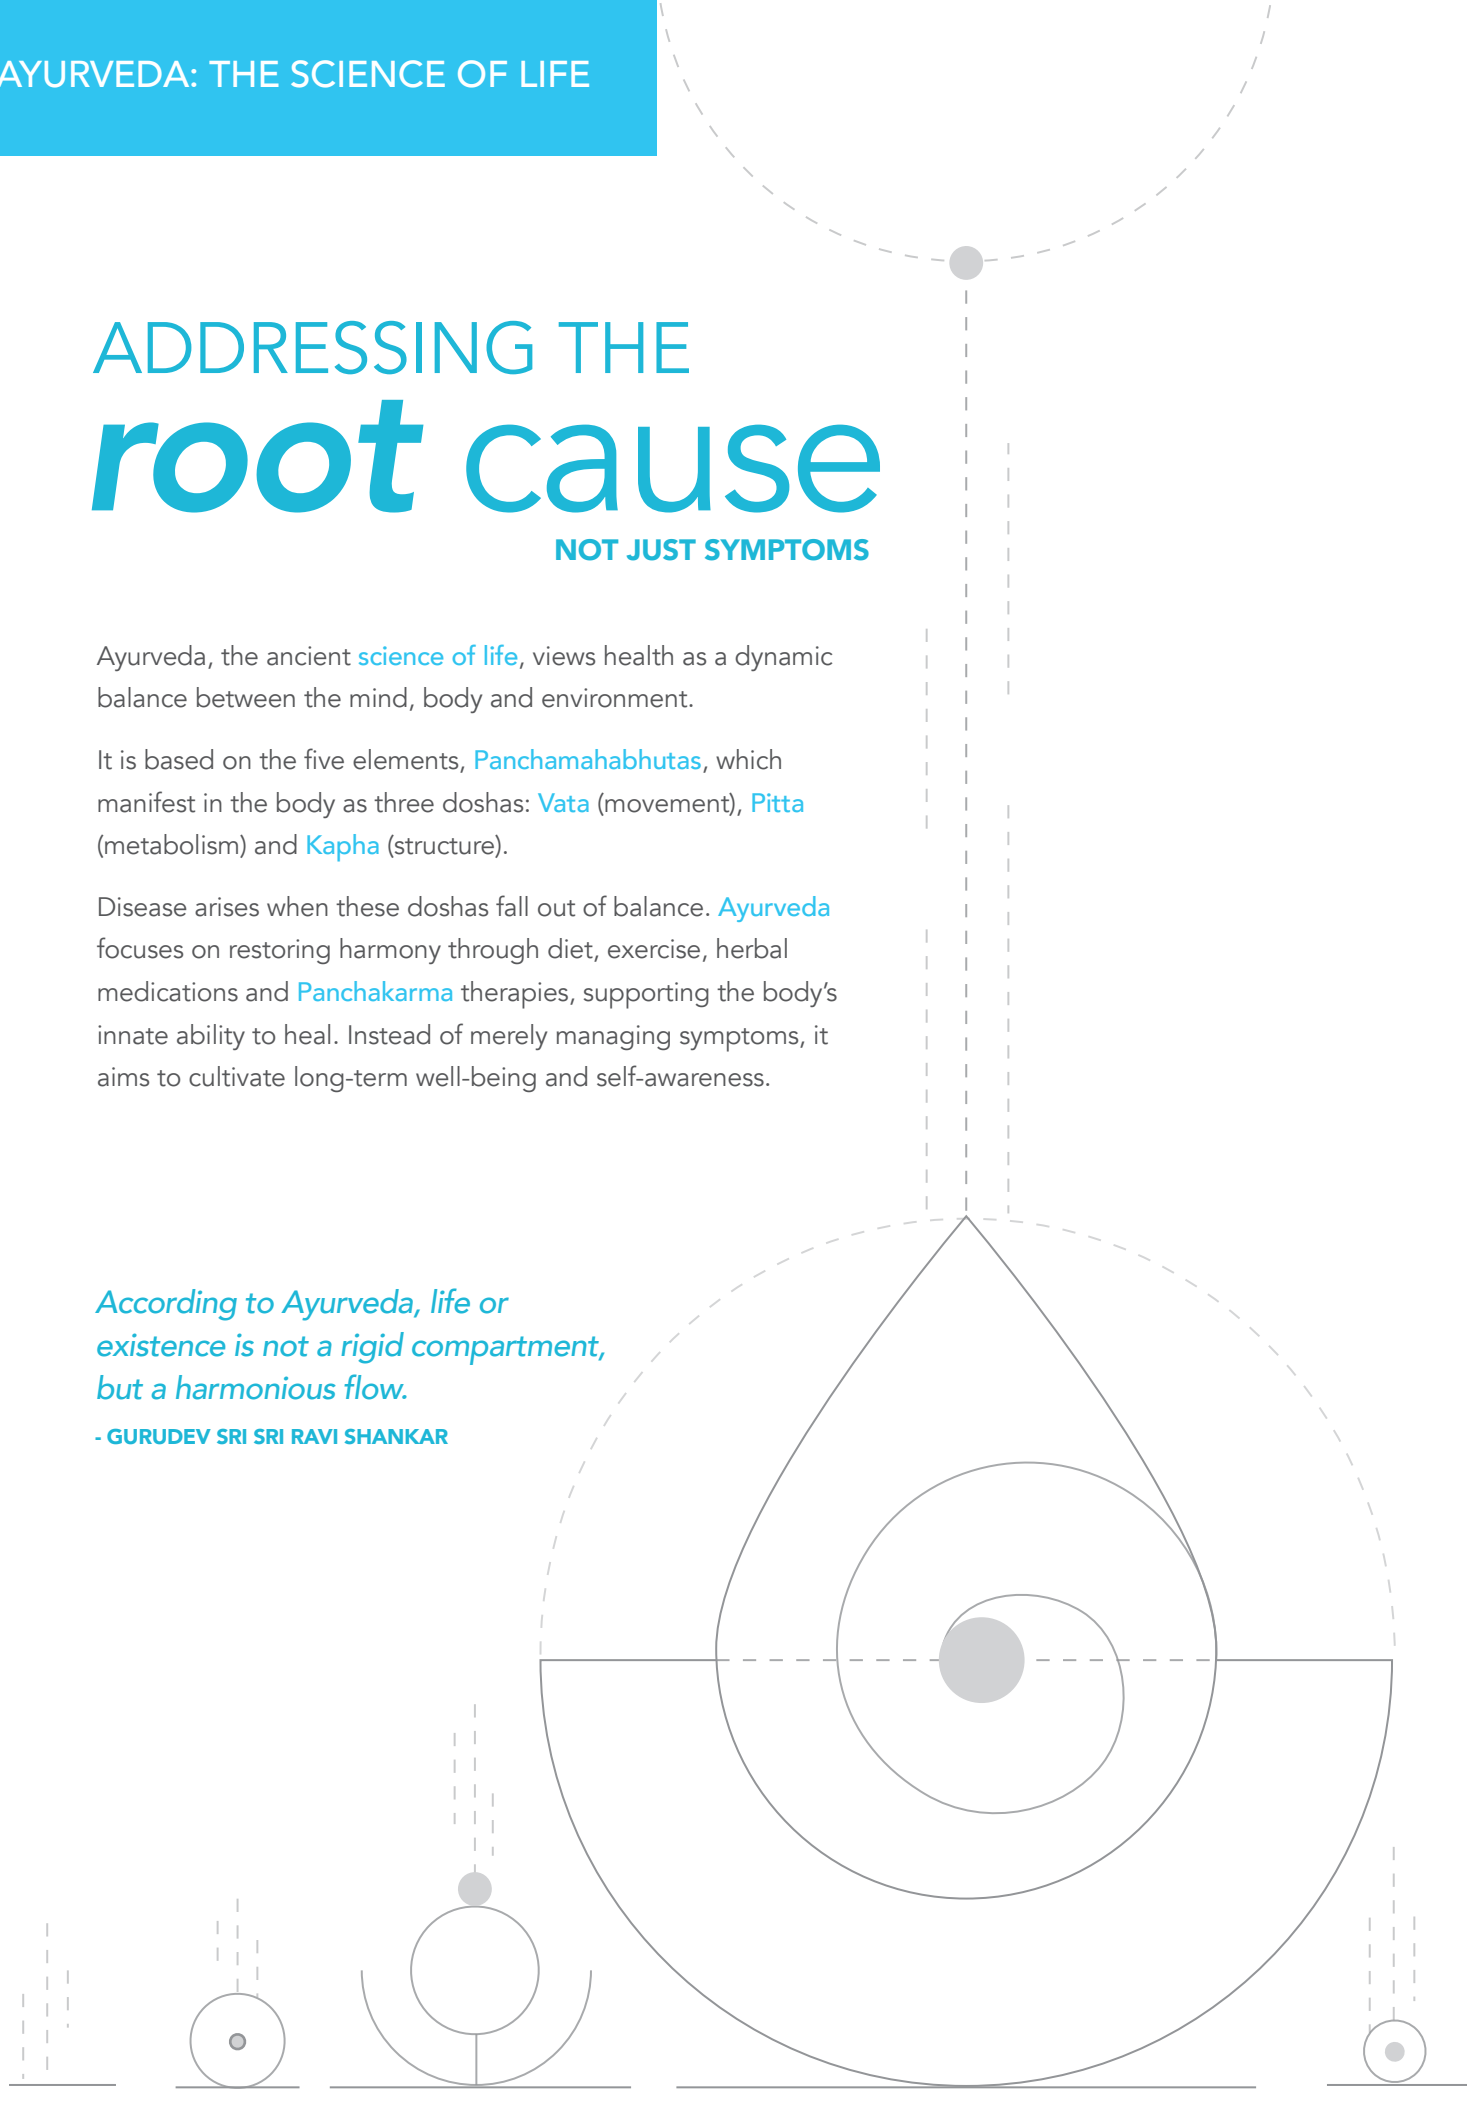

Ayurveda, the ancient [science of life](#), views health as a dynamic balance between the mind, body and environment.

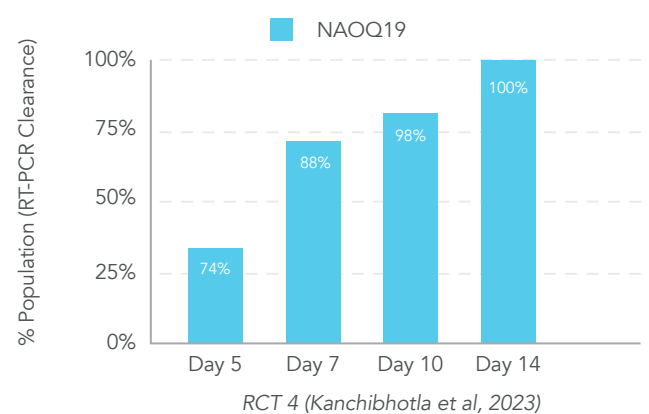

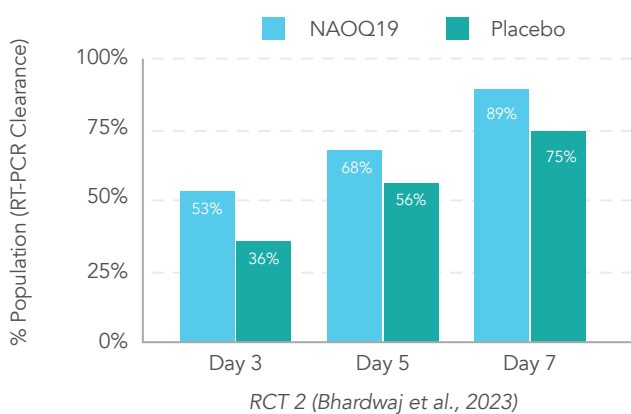

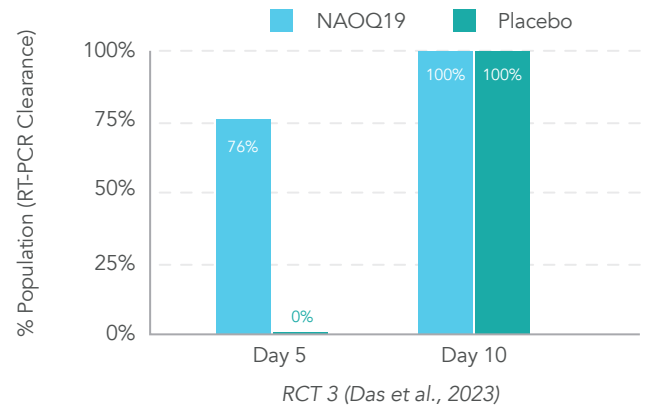

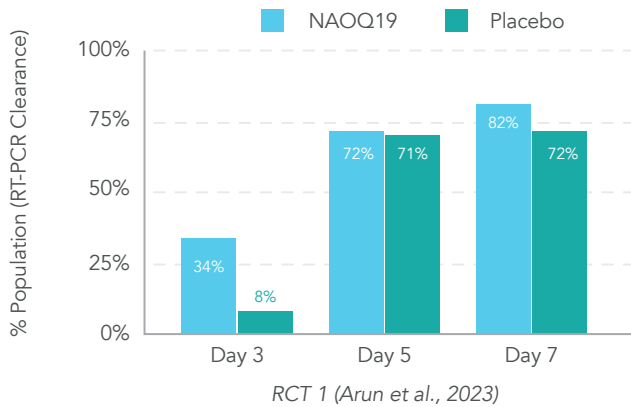

It is based on the five elements, [Panchamahabhutas](#), which manifest in the body as three doshas: [Vata](#) (movement), [Pitta](#) (metabolism) and [Kapha](#) (structure).

Disease arises when these doshas fall out of balance. [Ayurveda](#) focuses on restoring harmony through diet, exercise, herbal medications and [Panchakarma](#) therapies, supporting the body's innate ability to heal. Instead of merely managing symptoms, it aims to cultivate long-term well-being and self-awareness.

According to Ayurveda, life or existence is not a rigid compartment, but a harmonious flow.

FASTER COVID-19 RECOVERY WITH NAOQ19 AS AN ADD-ON TO STANDARD TREATMENT

These charts show results from four independent clinical trials testing the effect of NAOQ19 as an add-on to standard COVID-19 treatment. Researchers measured how quickly patients tested negative for the virus using RT-PCR tests - a key sign of recovery.

Across studies, patients receiving NAOQ19 alongside standard care cleared the virus faster than those receiving a placebo, suggesting NAOQ19 can help speed up recovery

As part of Traditional and Complementary Medicine (T&CM), Ayurveda is officially recognised in 170 countries - covering 88% of WHO Member States as part of their primary healthcare systems

NAOQ19 was approved by the Ministry of AYUSH, Government of India, as an add-on therapy for mild to moderate COVID-19

NAOQ19: A NATURAL ANTIVIRAL SHIELD

Preclinical study using Vero E6 cells
In vitro Study
Effect of NAOQ19 on SARS-CoV-2 infected cells

100% viral elimination at 0.9 mg/ml concentration

NAOQ19 demonstrated potent antiviral activity in cell-based models

NAOQ19 shows strong antiviral potential, supporting further preclinical and clinical research

Kanchibhotla et al., 2022

NAOQ19 OUTPERFORMS PLACEBO IN COVID-19 RECOVERY

44 Mild COVID-19 Patients
Double-Blind Randomised Controlled Trial
NAOQ19 + Standard of Care vs. Placebo: In 10 days

76% RT-PCR clearance by day 5 (vs. 0% placebo)

44% symptomatic relief by day 5 (vs. 5.2% placebo)

100% symptomatic recovery by day 10

No adverse effects seen

NAOQ19 accelerates recovery, reduces viral load and ensures safety, making it a promising treatment for mild COVID-19 cases

Das et al., 2023

NAOQ19 SPEEDS UP COVID-19 RECOVERY

161 COVID-19 Patients (Mild / Asymptomatic)
Single-Arm Pre-Post Study
NAOQ19 + Standard of Care: In 10 days

74% RT-PCR negative by day 5

98% RT-PCR negative by day 10

78% Asymptomatic by day 3

Symptom relief was observed as early as day 1

No adverse effects were reported

NAOQ19 shows promise in accelerating recovery and symptom resolution

Kanchibhotla et al., 2023

NAOQ19 ACCELERATES COVID-19 RECOVERY

124 Mild-to-Moderate COVID-19 Patients
Double-Blind Randomised Controlled Trial
NAOQ19 + Standard of Care vs. Placebo: In 10 days

57% reduced C-Reactive Protein (CRP) by day 5

34% RT-PCR clearance by day 3 (vs. 8% placebo)

82% RT-PCR clearance by day 7 (vs. 73% placebo)

0.8 days faster RT-PCR clearance

0.8 days shorter hospital stay

No adverse effects were reported

NAOQ19 along with standard of care treatment demonstrated higher recovery rates in comparison with those who were only on standard of care

Arun et al., 2023

NAOQ19 accelerates recovery, shortens hospital stays and demonstrates safety, supporting its use as an effective adjunctive treatment

Bhardwaj et al., 2023

NAOQ19 is an ayurvedic formulation with a blend of 19 powerful ingredients which work as an effective prophylactic against chronic viral infections.

Developed by Sri Sri Tattva, NAOQ19 helps enhance and strengthen the immune system, improve respiratory health and rejuvenate the body.

KABASURA KUDINEER PARALLELS STANDARD THERAPY IN MILD COVID-19

100 Adults with Mild or
Asymptomatic COVID-19

Double-Blind Randomised Controlled Trial

Kabasura Kudineer (KSK) vs.
Standard Therapy: In 10 days

84% recovered fully with KSK vs. 94%
with standard therapy

56% CRP reduction in vaccinated participants
with KSK vs. 61% with standard therapy

Trend-level increase in IgG levels among
unvaccinated KSK participants exceeded that
seen with standard therapy

Kabasura Kudineer tablets were comparable to
standard therapy in resolving symptoms and
improving immunity in mild COVID-19 cases

Khapre et al., 2023

KABASURA KUDINEER REDUCES VIRAL LOAD AND PROTECTS LUNGS

19 Syrian Golden Hamsters

In vivo Study

Effect of Kabasura Kudineer in 3 days

65% reduced lung viral load

Improved lung pathology: reduced oedema,
haemorrhage and congestion

No adverse effects observed in treated animals

Kabasura Kudineer significantly reduced
SARS-CoV-2 viral load and improved lung
health in hamsters without any side effects,
indicating safety and therapeutic potential in
early pre-clinical trials

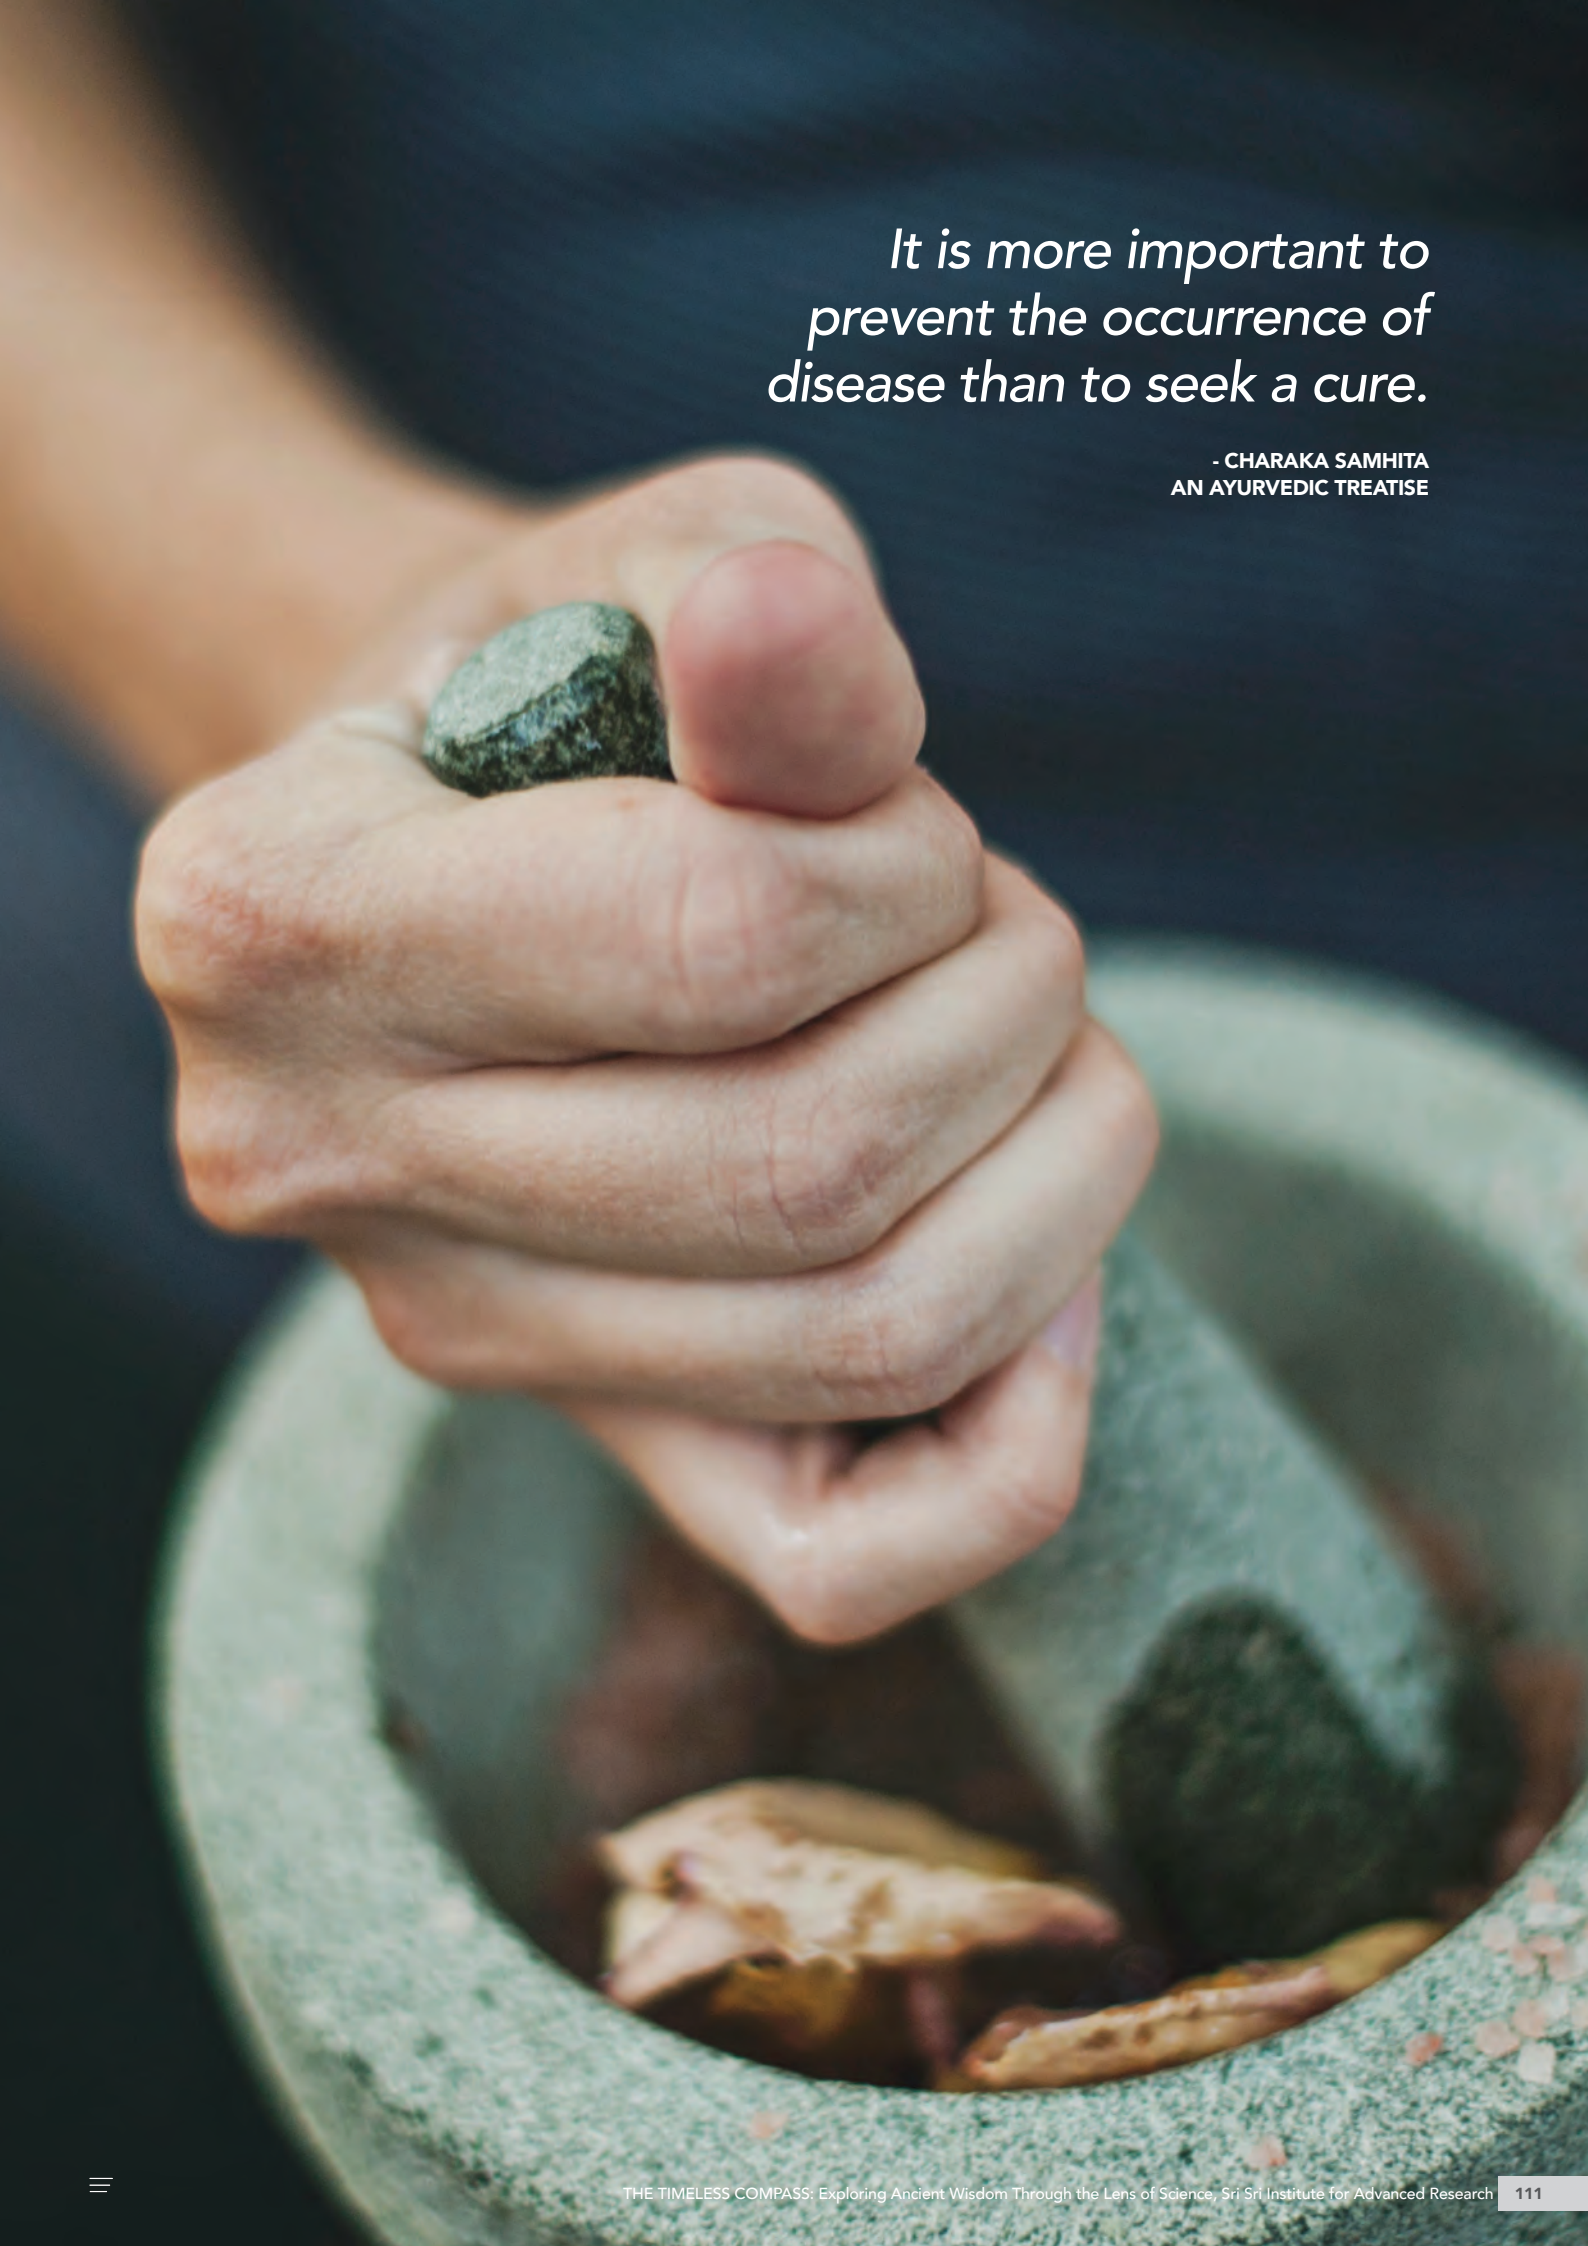

Kanchibhotla et al., 2024

NAOQ19 has shown strong antiviral
potential in laboratory studies and
encouraging clinical outcomes in
randomised trials.

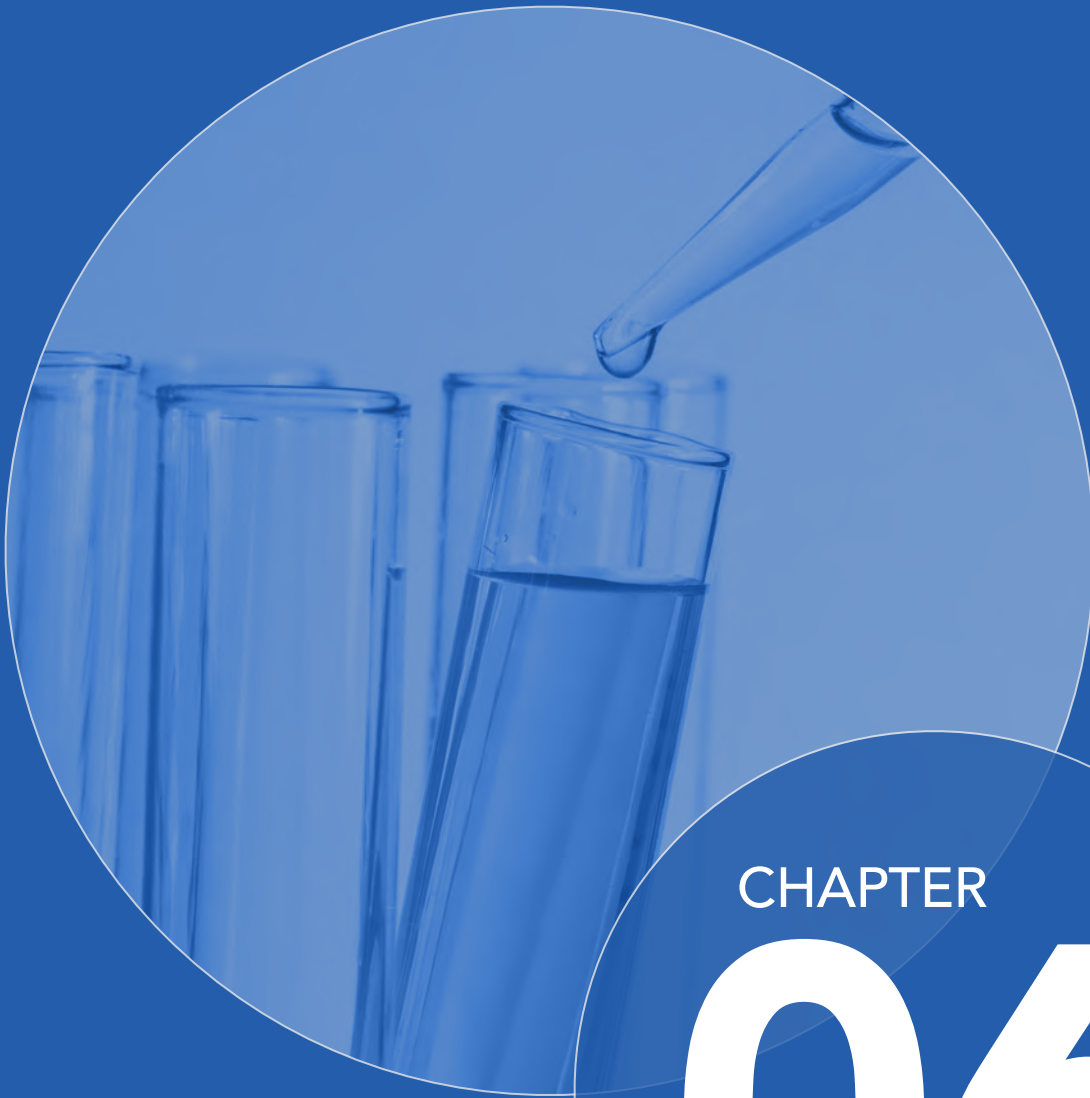

Patients receiving NAOQ19 recovered
faster than placebo groups, with many
achieving full symptom resolution within
10 days.

Kabasura Kudineer parallels standard
therapy in clinical trials and improved
lung health in preclinical studies - without
adverse effects.

SRI SRI INSTITUTE FOR ADVANCED RESEARCH

BRIDGING ANCIENT WISDOM WITH *modern* science

The Sri Sri Institute for Advanced Research pioneers research into Ancient Systems of Knowledge (ASK) - traditional wisdom, practices and techniques from the world's oldest civilisations.

While modern scientific methods have dominated problem-solving since the 17th century, SSIAR recognises that Ancient Systems of Knowledge offer complementary, holistic approaches to contemporary challenges.

RESEARCH *footprint*

For decades, numerous researchers globally have explored Ancient Systems of Knowledge through the lens of science.

Sri Sri Institute for Advanced Research has been at the forefront of this enquiry functioning as a central hub for knowledge aggregation, fostering scientific discourse, interdisciplinary collaboration and evidence-based dissemination.

By systematically curating global advancements in this field, we identify gaps, shape strategic research initiatives and catalyse cross-disciplinary engagement - bridging ancient wisdom with contemporary scientific enquiry to unlock new frontiers of understanding.

STUDY DESIGN GUIDE

I. *Experimental* study designs

Randomised
Controlled Trial
(RCT)

Participants are randomly placed into intervention and control groups to test whether an intervention works

Two-Arm
Non-Randomised
Pre-Post Study

Same as two-arm pre-post study, but without random group assignment

Double-Blind
RCT

Participants and researchers are both unaware of who receives the real treatment, reducing bias

Controlled
Crossover Study

Participants receive both the treatment and the comparison at different times, acting as their own control

Non-Randomised
Controlled Trial
(Non-RCT)

Two or more groups are compared, but participants aren't randomly assigned

Quasi-Experimental
Study

Tests whether an intervention works but doesn't use randomisation

Single-Arm
Pre-Post
Study

Only one group is studied before and after an intervention to check for changes

Pilot Study

A small-scale version of a study done before a full trial to test feasibility

Two-Arm Pre-Post
Study

Two groups are measured before and after an intervention to see how each changes over time

II. Evidence reviews and lab-based studies

Meta-Analysis

Combines results from multiple studies to get a bigger, clearer picture of an effect or trend

In vitro Study

Lab-based experiments on cells or tissues (outside the human body) to test effects before trying in humans

Narrative / Systematic Review

Summarises existing studies to show what's known and identifies knowledge gaps

In vivo Study

Lab-based experiments carried out inside a living organism (like animals or humans) to test effects before trying in humans

III. Qualitative and descriptive designs

Single-Case Study

A deep dive into one person or case - often used for rare or unique examples

Qualitative Study

Uses interviews or open-ended questions to explore how people think, feel or experience something

IV. Observational study designs

Observational Study (General)

Looks at what happens without interference, to explore possible links and relationship between factors

Cross-Sectional Study

A snapshot of a group at a single point in time - good for identifying trends, associations and linkages

Single-Arm Observational Study

A group is observed after receiving an intervention, but there's no comparison or before measure
